

Exhibit 1

Moving Forward

- The decision enables the agency to move forward with the project, replacing dozens of existing conventional air traffic control procedures with new satellite-based procedures
- The FAA plans to begin working immediately toward phasing in use of the procedures, starting in November 2016 and continuing through April 2017
- When the Southern California Metroplex procedures are implemented, some people might see aircraft where they did not previously fly. This is because some air route changes will occur, and because satellite-based procedures create more concentrated flight paths than conventional procedures
- Before publishing the procedures, the agency will conduct additional public information meetings and webinars to further inform people about the changes
